ISTQB® Agile Tester Foundation Level Extension in Software Testing - 2 Day Course

Course Overview

The certification for Foundation Level Extension - Agile Tester is designed for professionals who are currently working within Agile development environments. It is also for professionals whose organisations are planning to start implementing Agile methods. The certification provides an advantage for those who need to know Agile activities, roles, methods, and methodologies.

During this course you will learn:

- The principles and practices of Agile software development
- How to effectively collaborate in a cross-functional Agile team
- How to adapt existing testing experience and knowledge to Agile values and principles
- How to support the Agile team in planning test-related activities
- How to apply relevant methods and techniques for testing in an Agile project
- How to assist the Agile team in test automation activities
- How to assist business stakeholders in defining understandable and testable user stories, scenarios, requirements and acceptance criteria as appropriate
- How to work and share information with other team members using effective communication styles and channels

A Certified Agile Tester will have acquired the necessary skills to work effectively within an Agile team and environment.

Pre-requisites

No specific professional prerequisites are assumed for attendance on this course. Note however that in order to attempt the Foundation Level Extension - Agile Tester exam, candidates must have first obtained the ISTQB Foundation Level certificate (CTFL).

Level and Orientation of Audience

The Foundation Level Extension - Agile Tester qualification is aimed at professionals who are interested in understanding the testers role in an Agile environment, and need more understanding and knowledge about how to perform and manage testing at all levels in Agile projects.

This course is ideal for quality analysts, testers, test analysts, test engineers, test consultants, test managers, user acceptance testers, software developers, project managers, quality managers, software development managers and business analysts.

Examination

This course will prepare you for the ISTQB© CTFL-AT (Certified Tester Foundation Level Agile Tester) exam. The exam is not provided as part of this course but can be independently scheduled through Pearson Vue at <http://www.pearsonvue.com/isqi/>.

Details on the exam are available at:

https://www.isqi.org/tl_files/data/documents/BoE/BoE_ISTQB_Agile_Extension.pdf

Follow on Courses

Once the Foundation Level Agile Tester qualification has been achieved, there are three further courses of study:

- ISTQB Advanced Level Certificate - Test Manager
- ISTQB Advanced Level Certificate - Test Analyst
- ISTQB Advanced Level Certificate - Technical Test Analyst

ISTQB Agile Extension Course Presenter - Fergal Hynes

Fergal has 23 years of commercial experience in the software development and test industry in Ireland and abroad, operating at all levels from technical expert through to senior manager. Qualifications include an honours degree in Electronic Engineering, certified ScrumMaster and Fergal is an ISTQB© certified tester at all levels (CTFL\CTFL-AT\CTAL-TM\ CTAL-TA\ CTAL-TTA). Fergal has spoken at international software conferences on the topic of software testing and software test automation.
